CERTIFICATE

This is to certify that the dissertation entitled "**AI-Powered Student Grievance and Resolution System**" is a Bonafide work of **Vishwajeet Darekar** (**2023-B-09062005A**), **Machindra Chitale (2023-B-27052004A)**, **Sachin Jagtap (2023-B-20012005B)**, **Anand Mahalle (2023-B-14102005D)** submitted to the School of Engineering, Ajeenkya D Y Patil University, Pune in partial fulfillment of the requirement for the award of "Bachelor of Computer Applications (Full Stack Development)".

Asst. Prof. Nilofar Shikalgar
Supervisor

Internal-Examiner/s **External Examiner**

Dr. Prashant Kumbharkar
Dean, School of Computer Engineering

Supervisor's Certificate

This is to certify that the dissertation entitled "**AI-Powered Student Grievance and Resolution System**" submitted by **Vishwajeet Darekar (2023-B09062005A), Machindra Chitale (2023-B-27052004A)**, **Sachin Jagtap (2023-B-20012005B)**, **Anand Mahalle (2023-B-14102005D)** is a record of original work carried out by him under my supervision and guidance in partial fulfillment of the degree of Bachelor of Computer Applications at School of Engineering, Ajeenkya D Y Patil University, Pune, Maharashtra-412105. Neither this dissertation nor any part of it has been submitted earlier for any degree or diploma to any institute or university in India or abroad.

Asst. Prof. Nilofar Shikalgar
Supervisor

Declaration of Originality

We all team members, hereby declare that this dissertation entitled “AI-Powered Student Grievance and Resolution System” presents my original work carried out as a BCA student of the School of Engineering, Ajeenkya D Y Patil University, Pune, Maharashtra. To the best of my knowledge, this dissertation contains no material previously published or written by another person, nor any material presented by me for the award of any degree or diploma of Ajeenkya D Y Patil University, Pune, or any other institution.

I also declare that I have adhered to all principles of academic honesty and integrity and have not misrepresented or fabricated any idea/data/fact/source in this submission. I am fully aware that in case of any non-compliance detected in the future, the Academic Council of Ajeenkya D Y Patil University, Pune, may withdraw the degree awarded to me on the basis of the present dissertation.

We are fully aware that in case of any non-compliance detected in the future, the Academic Council of Ajeenkya D Y Patil University, Pune, may withdraw the degree awarded to us on the basis of the present dissertation.

Date: Feb 16, 2026

Place: Lohegaon, Pune

Acknowledgement

I would like to express my sincere gratitude to my project guide for their invaluable guidance, continuous support, and encouragement throughout the development of this project. This project titled "**AI-Powered Student Grievance and Resolution System**" would not have been possible without their insights and mentorship.

I also thank the faculty and administration of the **School of Engineering**, **Ajeenkya D Y Patil University**, Pune, for providing me the opportunity and platform to work on this innovative project.

I am equally grateful to my family and friends for their constant motivation and belief in me.

Date: Feb 16, 2026

Chapter 2	**Proposed System**	

Chapter 1: Introduction

Students are the primary stakeholders of any educational institution, and their academic and administrative concerns must be addressed efficiently and fairly. A grievance refers to any dissatisfaction raised by a student regarding academics, examinations, faculty behaviour, infrastructure, hostel facilities, harassment, or administrative processes. An effective grievance redressal system is essential to maintain transparency, trust, and discipline within the institution.

In many institutions, grievance handling is still managed through traditional methods such as handwritten applications, emails, or verbal communication. These manual processes often lack centralized tracking, leading to delays, poor communication, misplaced complaints, and lack of transparency. As a result, students may feel unheard, and authorities may struggle to monitor pending grievances or analyze recurring issues.

To overcome these challenges, there is a need for a structured and technology-driven solution. The proposed project, **"AI-Powered Student Grievance and Resolution System"** aims to develop a web-based system that allows students to submit complaints online, upload supporting documents, and track the status of their grievances in real time.

The system will enable authorities to categorize complaints, assign priorities, set deadlines, and monitor resolution progress. An integrated accountability mechanism will track response times and performance metrics to ensure grievances are resolved within defined time limits. The platform will also generate analytical reports to help management identify trends and improve institutional policies.

1.1 Existing System

In most educational institutions, grievance redressal is handled through traditional and manual methods. Students typically submit complaints through handwritten applications, emails, or verbal communication to faculty members or department authorities. These grievances are then processed informally by different departments without a centralized monitoring system.

The existing system has several limitations:

- Complaints are maintained in physical files or scattered email records
- No centralized database for tracking grievance history
- Lack of transparency in resolution process
- No proper deadline monitoring
- Delays due to manual forwarding between departments
- Students are not informed about the real-time status of their complaint
- No performance monitoring of grievance handling authorities

Because of these drawbacks, grievances often remain unresolved or take excessive time to process. There is no structured accountability mechanism to ensure timely resolution, which affects student satisfaction and institutional trust.

1.2 Problem Definition – Need for Computerization

The current manual grievance handling system is inefficient, time-consuming, and lacks transparency. Students face difficulties in tracking their complaints and often do not receive timely updates. Authorities also lack a systematic approach to monitor grievance resolution timelines and maintain proper documentation.

The major problems identified are:

- Absence of centralized grievance management
- Lack of real-time tracking system
- No automated notification mechanism
- Poor documentation and record maintenance
- No accountability tracking for response time
- Difficulty in generating reports and analytics
- Increased paperwork and administrative burden

Need for Computerization

To overcome these limitations, there is a strong need to computerize the grievance redressal system. A digital platform will:

- Provide centralized complaint management
- Enable online grievance submission anytime, anywhere
- Allow real-time status tracking
- Ensure transparency and accountability
- Reduce paperwork and manual errors
- Improve communication between students and authorities
- Generate automated reports and performance analytics
- Enforce deadline-based grievance resolution
